### UNIVERGE SV9100 CP20 Release 10.5

The UNIVERGE SV9100 is designed to meet the requirements of small to medium/large businesses and is designed to meet the Telephony and UC requirements for today and the future.

The launch of SV9100 CP20 at software version R10 gave an enhanced processor allowing more features and InApps to be made available.

Consistently improving further the product, we now announce the release of SV9100 R10.5 software giving a mix of improved features, new features and new products to the portfolio.

The variety of enhancements will aid the end user, engineers and improve competitiveness.

R10.5 software includes these new and enhanced features:-

- **InScheduler support** – A new InApp allowing the scheduling of Voice and Web Video Conferencing
- **IRG Logon** – Ability to log in and out of Incoming Ring Groups
- **IRG Delayed Ringing** – Flexible timing to allow different points for IRG members to start ringing.
- **SIP Trunk Password increased to 64 Chars** – Enhanced security requirement for SIP Trunks giving greater **compatibility**
- **Improved InUC display sizing for GT890** – Provides a better use of the screen when using keyboard view.

For full details on each feature please refer to the SV9100 R10.5 Release Overview.

### Compatibility

InScheduler is available for the SV9100 CP20 system.

## Pricing aspects & Items

This version of software does not require any purchasable license.

The software can be installed on any SV9100 with its existing R10 Version license.
