## InHotel 1.9.0

InHotel is one of the group of InAPPs for the SV9100 and SL2100 platforms. InHotel is an always-on application which runs on the SV9100 and SL2100 platforms 24/7.

InHotel is NECs own Front of House Application used within a hotel to make room reservations, manage rooms, housekeeping, folios and provide reports for use by the hotel staff.
As InHotel resides on the platform it negates the need for additional hardware.

This release of InHotel software enhances the application still further by the addition of multiple features including:

- Flexible invoice format
- HTTPS support
- SiteMinder integration via InOTA
- Reports – introduction of date range to reports.
- Mandatory Guest details
- Guest search facility
- Additional identity medium ability
- Configurable user interface colours
- Integration with BCT and MyCalls consoles
- Multiple folios per guest

Compatibility

InHotel 1.9.0 package can be installed on SL2100 and SV9100. The architecture differences are handled automatically.

Pricing Aspects & Items

Pricing can be obtained from your NEC representative/Channel Manager or Prophix.

Documentation

Documentation relating to InHotel is available for download on BusinessNet.

Additional Partner Materials

With the release of version 1.9.0 of InHotel NEC has also updated and extended the available commercial materials that enables you as our partner in positioning and selling InHotel in combination with our SL2100 and SV9100.
