InFIAS 1.8.0

InFIAS is one of the group of InAPPs for the SV9100 and SL2100 platforms. InFias is an always-on application which runs on the SV9100 and SL2100 platforms 24/7.
It is designed to provide integration between the PMS interface and a Front of House system complying with the MicrosFidelio FIAS 2.2x protocol. InFias, like all InApps, is a browser based embedded application.

This release of InFIAS software enhances the application still further by adding the ability to import and export the toll tariff table to a text editable format to allow for easier and quicker installation.

Compatibility

Compatible with FIAS 2.2x, the same InFIAS-1.8.0 package can be installed on SL2100 and SV9100. The architecture differences are handled automatically.

Pricing Aspects & Items

Pricing can be obtained from your NEC representative/Channel Manager or Prophix.

Documentation

Documentation relating to InFIAS is available for download on BusinessNet.

Additional Partner Materials

With the release of version 1.8.0 of InFIAS NEC has also updated and extended the available commercial materials that enables you as our partner in positioning and selling InFIAS in combination with our SL2100 and SV9100.
