

PORTFOLIO BULLETIN

2021-001 | January 4

MobiCall LMC

The global virtual machine market has been growing for the last decade and it is expected to grow even faster in the coming years. Although MobiCall could work in this environment with USB dongles and the so called dongle server, the time has come to phase out this technology and move over to NEC's well known LMS-LMC system. The advantage is not only the "dongle less" technology but it will also improve the delivery time dramatically as licences can be generated instantly after the order has been processed.

Phased introduction

With this bulletin we announce the introduction of LMC for new MobiCall Master and Supervisor systems. All new orders from January, 4th 2021 will be processed without USB dongle and its corresponding licence key. Instead it will need the hardware key code of the connected communication server (PBX) or the hardware key produced by the LMC server itself in case a 3rd party PBX is involved.

Software version compatibility

LMC is supported from MobiCall version V10.0.6.

Note that V10.0.x will be the last supported version for dongle based systems; release V11 (expected in Q1/2021) will only be supported on LMC systems.

In the course of February 2021, another Portfolio Bulletin will be released describing the migration from dongle based MobiCall systems to LMC.

Pricing aspects & Items

For LMC a full set of new part numbers is made available and can be found in Annex 1. In general the pricing (on part level) has not changed however due to the LMC structure in combination with large/complex and redundant configurations some additional parts can be generated and can add cost to the total configuration. If you are dealing with this rare exception, please discuss with your channel manager how to overcome this issue.

Pricing can be obtained from your NEC representative/Channel Manager or from Prophix.

Software Assurance (SWA)

One year SWA is mandatory since 24th of January 2019 and will be continued for MobiCall LMC in the same way.

Documentation

There is a document helping you with the installation of MobiCall LMC and can be found [here](#).

Webinars

As the way of working is more or less standard there is no Webinar planned. However there will be a webinar planned when introducing the migration from dongle based systems to LMC.

Availability & Order Information

MobiCall LMC will be available in Prophix per January, 4th.
Approximately at the same date MobiCall version V10.0.6 will be downloadable from the Software download database.

Annex 1: Part codes MobiCall LMC
